

CLAIMS

1. A method of diagnosing DGC or a predisposition to developing DGC in a subject, comprising determining a level of expression of a DGC-associated gene in a patient derived biological sample, wherein an increase or decrease of said level compared to a normal control level of said gene indicates that said subject suffers from or is at risk of developing DGC.
2. The method of claim 1, wherein said DGC-associated gene is selected from the group consisting of DGC 1-136, wherein an increase in said level compared to a normal control level indicates said subject suffers from or is at risk of developing DGC.
3. The method of claim 2, wherein said increase is at least 10% greater than said normal control level.
4. The method of claim 1, wherein said DGC-associated gene is selected from the group consisting of DGC 137-463, wherein a decrease in said level compared to a normal control level indicates said subject suffers from or is at risk of developing DGC.
5. The method of claim 4, wherein said decrease is at least 10% lower than said normal control level.
6. The method of claim 1, wherein said method further comprises determining said level of expression of a plurality of DGC-associated genes.
7. The method of claim 1, wherein the expression level is determined by any one method select from group consisting of:
 - (a) detecting the mRNA of the DGC -associated genes,
 - (b) detecting the protein encoded by the DGC -associated genes, and
 - (c) detecting the biological activity of the protein encoded by the DGC -associated genes.
8. The method of claim 7, wherein said detection is carried out on a DNA array.
9. The method of claim 1, wherein said biological sample comprises a mucosal cell.
10. The method of claim 1, wherein said biological sample comprises a tumor cell.

- 57 -

11. The method of claim 1, wherein said biological sample comprises a gastric cancer cell.
12. A DGC reference expression profile, comprising a pattern of gene expression of two or more genes selected from the group consisting of DGC 1-463.
- 5 13. A DGC reference expression profile, comprising a pattern of gene expression of two or more genes selected from the group consisting of DGC 1-136.
14. A DGC reference expression profile, comprising a pattern of gene expression of two or more genes selected from the group consisting of DGC 137-463.
- 10 15. A method of screening for a compound for treating or preventing DGC, said method comprising the steps of:
 - a) contacting a test compound with a polypeptide encoded by DGC 1-463;
 - b) detecting the binding activity between the polypeptide and the test compound; and
 - c) selecting a compound that binds to the polypeptide.
- 15 16. A method of screening for a compound for treating or preventing DGC , said method comprising the steps of:
 - a) contacting a candidate compound with a cell expressing one or more marker genes, wherein the one or more marker genes is selected from the group consisting of DGC 1-463; and
 - b) selecting a compound that reduces the expression level of one or more marker genes selected from the group consisting of DGC 1-136, or elevates the expression level of one or more marker genes selected from the group consisting of DGC 137-463.
- 20 17. A method of screening for a compound for treating or preventing DGC, said method comprising the steps of:
 - a) contacting a test compound with a polypeptide encoded by selected from the group consisting of DGC 1-463;
 - b) detecting the biological activity of the polypeptide of step (a); and
 - c) selecting a compound that suppresses the biological activity of the polypeptide encoded by DGC 1-136 in comparison with the biological activity detected in the absence of the test compound, or enhances the biological activity of the
- 25
- 30

polypeptide encoded by DGC 137-463 in comparison with the biological activity detected in the absence of the test compound.

18. The method of claim 16, wherein said test cell comprises a gastric cancer cell.
19. A method of screening for compound for treating or preventing DGC, said method comprising the steps of:
 - 5 a) contacting a candidate compound with a cell into which a vector comprising the transcriptional regulatory region of one or more marker genes and a reporter gene that is expressed under the control of the transcriptional regulatory region has been introduced, wherein the one or more marker genes are selected from the group consisting of DGC 1-463
 - b) measuring the activity of said reporter gene; and
 - c) selecting a compound that reduces the expression level of said reporter gene when said marker gene is an up-regulated marker gene selected from the group consisting of DGC 1-136 or that enhances the expression level of said reporter gene when said marker gene is a down-regulated marker gene selected from the group consisting of DGC 137-463, as compared to a control.
- 10 20. A kit comprising a detection reagent which binds to two or more nucleic acid sequences selected from the group consisting of DGC 1-463.
- 15 21. An array comprising a nucleic acid which binds to two or more nucleic acid sequences selected from the group consisting of DGC 1-463.
- 20 22. A method of treating or preventing DGC in a subject comprising administering to said subject an antisense composition, said composition comprising a nucleotide sequence complementary to a coding sequence selected from the group consisting of DGC 1-136.
- 25 23. A method of treating or preventing DGC in a subject comprising administering to said subject a siRNA composition, wherein said composition reduces the expression of a nucleic acid sequence selected from the group consisting of DGC 1-136.
24. A method for treating or preventing DGC in a subject comprising the step of administering to said subject a pharmaceutically effective amount of an antibody or

fragment thereof that binds to a protein encoded by any one gene selected from the group consisting of DGC 1-136.

25. A method of treating or preventing DGC in a subject comprising administering to said subject a vaccine comprising a polypeptide encoded by a nucleic acid selected from the group consisting of DGC 1-136 or an immunologically active fragment of said polypeptide, or a polynucleotide encoding the polypeptide.
5
26. A method of treating or preventing DGC in a subject comprising administering to said subject a compound that increases the expression or activity of DGC 137-463.
27. A method for treating or preventing DGC in a subject, said method comprising the
10 step of administering a compound that is obtained by the method according to any one of claims 15-19.
28. A method of treating or preventing DGC in a subject comprising administering to said subject a pharmaceutically effective amount of polynucleotide select from group consisting of DGC 137-463, or polypeptide encoded by thereof.
- 15 29. A composition for treating or preventing DGC, said composition comprising a pharmaceutically effective amount of an antisense polynucleotide or small interfering RNA against a polynucleotide select from group consisting of DGC 1-136 as an active ingredient, and a pharmaceutically acceptable carrier.
30. A composition for treating or preventing DGC, said composition comprising a
20 pharmaceutically effective amount of an antibody or fragment thereof that binds to a protein encoded by any one gene selected from the group consisting of DGC 1-136 as an active ingredient, and a pharmaceutically acceptable carrier.
31. A composition for treating or preventing DGC, said composition comprising a pharmaceutically effective amount of the compound selected by the method of any
25 one of claims 15-19 as an active ingredient, and a pharmaceutically acceptable carrier.
